

**Red Rock Power Limited**

# Supporting supply chain growth

## About Red Rock Power

**Red Rock Power Limited – a Scotland based renewable energy company – is growing and diversifying its portfolio of assets, both in the UK and new European markets.**

As an investor and owner-operator, we rely on a strong supply chain which prioritises quality, drives innovation and helps improve cost optimisation at all stages of the lifecycle, from project conception to operations and maintenance, as well as merger and acquisition activity.

To support this expansion and growth journey, we are eager to collaborate with UK, European and global suppliers in all areas of expertise. Whether you are a renewables veteran, a company with transferable skills and experience moving into the sector or are an SME creating exciting innovations, we want to hear from you.

### Working with us

While we continue to grow our portfolio and Edinburgh team, we retain a small business approach. This brings benefits to how we work with our supply chain such as increased accessibility, accountability and short, flexible decision-making processes.

Our multi-contracting procurement strategy allows for a close working, hands-on relationship and we very much see suppliers as an extension of our team. This approach also allows greater collaboration where we can inform and help drive innovative solutions while protecting suppliers' intellectual property.

## Our Procurement Priorities

**Red Rock Power's key procurement objective is to secure cost effective, high-quality products and services for our growing portfolio.**

We are only as strong as our supply chain and as such we are eager to support development across the industry.

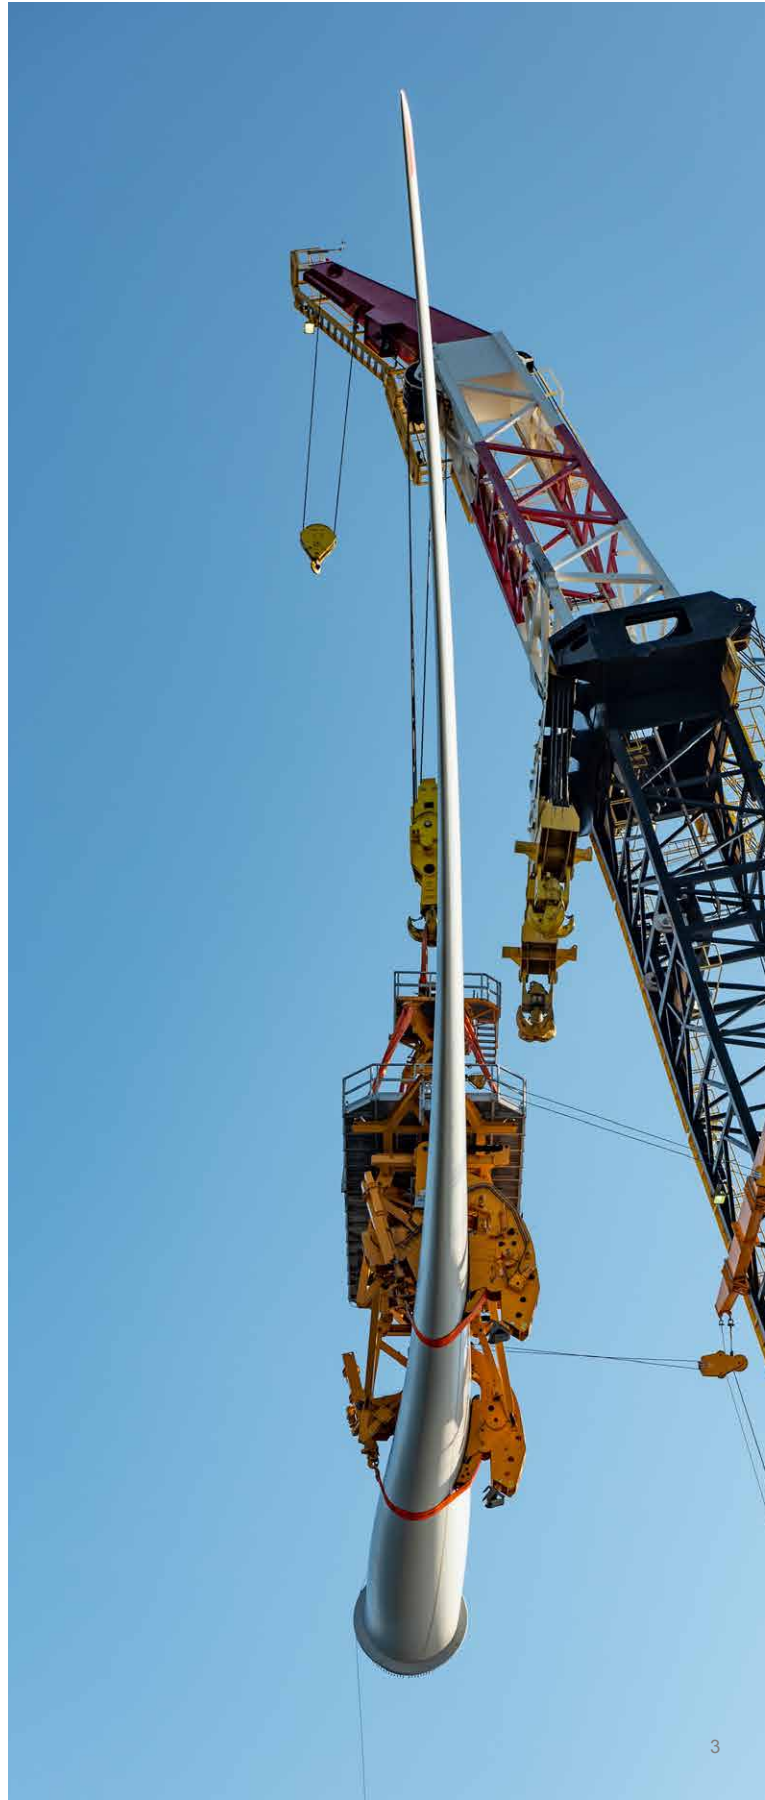

We work closely with the local supply chain to identify and deliver opportunities for local businesses. We also value the global supply chain and the experience it brings as we look to expand into new markets and sectors. Our multi-contracting approach will allow us to deliver greater access and opportunities for smaller local businesses.

**“ We are only as strong  
as our supply chain**

We are constantly considering opportunities to improve and optimise all aspects of our projects and pay particular attention to how new innovations, technologies and approaches can help us overcome challenges or maximise opportunities, such as lowering the cost of energy and improving efficiency. We would encourage suppliers to share new ideas and are eager to collaborate with them to develop these further, delivering the best and most efficient solutions to benefit our projects as well as the wider industry.

High health and safety standards are also a key priority, and this will never be compromised. We expect exemplary safe working practices across all elements of work on our projects. We are interested to hear how new ways of working can help tackle our key concerns and improve on industry best practice.

We are very mindful of our company's carbon footprint, both in our Edinburgh office and on our project sites, and we expect our suppliers to recognise their own impacts on the environment. We are looking for suppliers who demonstrate sustainable working practices and use sustainable materials.

## Registering Your Interest

To ensure you are notified of forthcoming opportunities, please confirm your interest by completing an [online registration form](#).

Here, you will also have an opportunity to request a one-to-one 15-minute discussion with the relevant technical and commercial teams within our business and briefly present your company and ideas.

### Evaluation criteria

During the one-to-one sessions, our team will use an evaluation criteria to consider whether you are a good fit for our business. These include technology readiness; cost, capacity and capabilities; and value proposition against our own requirements and challenges. We will also consider how your offering supports our own objectives such as high health and safety standards and sustainable working practices.
